San Mateo, CA - Software Pursuits Dives into File Server Migration, Consolidation and Share Protection

Software Pursuits' newest product, MigratePro, further advances the company's quest to provide reliable & cost effective products to companies seeking data management, availability, and protection software.

MigratePro takes the grunt work out of the server migration process and allows users to fully automate file server migration, file server consolidation and share protection.

MigratePro helps solve multiple issues when migrating shares and their settings. It will provide those users, seeking to retire old servers, the capability to easily migrate shares, share permissions, local groups and users to their new servers all through an easy to use interface. Additionally MigratePro enables companies to consolidate their shares on file servers into one single server, promoting a more energy efficient server environment. Lastly, but not least, MigratePro will allow companies to automate the process of protecting shares; making them available on a secondary server.

MigratePro is licensed for use with Windows servers, but can also be used in a workstation environment which makes MigratePro a unique offer among its competitors.

Software Pursuits offers a free 30-day trial of MigratePro. Prices for server licenses start out at \$375.00 per server with a minimum of 2 licenses necessary to migrate settings from one server to another. MigratePro Workstation Licenses start at \$50.00 per PC with a minimum of 2 licenses necessary to migrate settings from one PC to another.

The free MigratePro trial can be downloaded from www.MigratePro.com

About Software Pursuits

Software Pursuits, Inc. (SPI) is a manufacturer and worldwide distributor of enterprise systems software products. Founded in 1975, SPI developed an extensive mainframe product-line with the basic notion to make complex computing tasks simple by creating software solutions that are flexible, easy-to-use, and reliable.

Today SPI uses this same mind-set to develop the SureSync product-line to help companies implement a cost-effective and reliable method to distribute, share, protect and recover data.
