

MigratePro

File Server Migration & Consolidation

MigratePro is a flexible and fully featured file server migration and consolidation software solution, providing an automated means of copying shares between Windows Server Operating Systems (2000/2003/2008) and Windows PC Operating Systems (XP/Vista).

MigratePro makes migration a quick and painless process; allowing you to copy shares, share permissions, share settings, local user accounts & groups, NTFS compression settings, and all of the data within those shares.

■ **One-to-One or One-to-Many Server Migration**

Whether you're looking to retire an old file server or propagate shares to multiple file servers, MigratePro gives you the flexibility to migrate shares from one server to another or from one server to many.

■ **Many-to-One Server Consolidation**

MigratePro also allows you to migrate multiple source shares into a single larger share for those seeking to consolidate machines to conserve costs, save energy, and reduce the number of servers under management.

■ **Migrate Shares, Local Groups & Users**

MigratePro's process of copying shares includes copying the share name and also maintains all share settings such as cache settings, share permissions, and concurrent connection limits. Additionally, MigratePro allows you to migrate local groups and users, with options to ensure you share migrates properly regardless of whether the share already exists on the destination machine.

■ **Maintain NTFS Permissions**

MigratePro ensures that NTFS Permissions are copied to your destination(s) to preserve access to your newly migrated share.

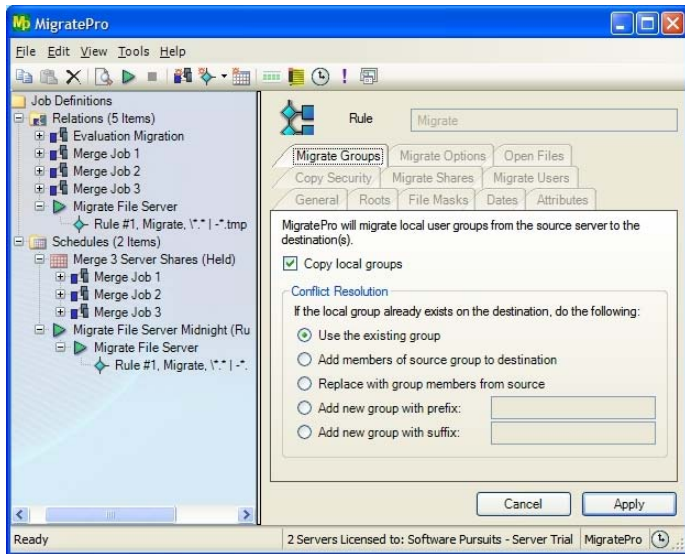

■ **Copy NTFS Compression Settings**

MigratePro provides options to maintain NTFS compression on the migrated file, compress all files, or compress none of the destination files.

■ **Automate Migrations**

MigratePro allows migrations to be executed on-command or using the built-in scheduler. Whether you need to run your server migration immediately or consolidate your servers during the off-hours, MigratePro will provide the method for you to easily migrate and consolidate your shares.

■ Open File Technology

Our open file technology ensures that you can migrate shares to a separate machine without having to close source files.

■ Simple Installation and Setup

Simply launch the installer for MigratePro and it will install the software and appropriate components. Wizards will provide assistance for you through each step of your migration process.

About Software Pursuits, Inc.

Software Pursuits, Inc. (SPI) has been designing and delivering innovative software solutions for enterprise information systems since 1975. SPI's founders started with a passion for making complex computing tasks simple by creating software solutions that are flexible, easy-to-use, and reliable.

Today, SPI continues to employ IT professionals who understand the intricacies of their customers' problems. SPI believes problems can easily be addressed by providing dependable, predictable performance in both products and services. The company maintains its dedication to provide the highest level of support to its customers around the clock.
